1. UB Motion simulator cabin

This video shows the correspondence between the simulation operator monitor view, and the vehicle driver view, sitting inside the vehicle cabin, observing the large screens.

2. Four-screen hexagonal surround view

This video shows an elevated view of the simulator in action, from behind the simulator. Here, we can see the importance that the rear-screen view plays in the execution of the vehicle simulation.

3. Sample driving world

This video demonstrates the virtual world that will be leveraged for the proposed study. The environment shown includes a non-intelligent, pre-programmed traffic model – this will be perfected in the proposed study.
