Branching and merging in git

Starting point: a sequence of commits all in the master branch.
Branching and merging in git

Create a new branch named 'bugfix':

git branch bugfix
Branching and merging in git

Move HEAD to new branch

git checkout bugfix
Branching and merging in git

Make a commit on bugfix branch
Branching and merging in git

Make another commit on bugfix branch
Branching and merging in git

Check out master again:

```
git checkout master
```
Branching and merging in git

Merge bugfix into master:

git merge bugfix

Since no other commits were made to master in between this merge is straightforward.
