Activities

Team building for the impossible

Unlearning

Critical imagining

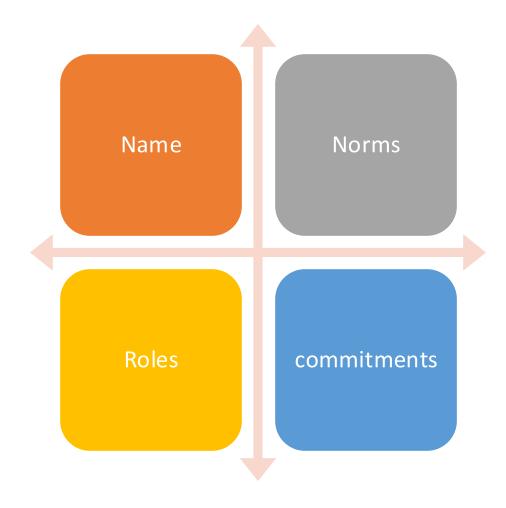

Your Impossible Project is...

Reimagine digital technologies for a just world.

Activity 1: Team Building for the impossible [10min]

• Principles:

- Name- unique and representing the whole.
- 3 Norms- that will ensure the functionality of the team.
- Roles Match your ability with the team's needs. Center the team's needs rather than your talent.
- Commitments- openness, care, vulnerability/humility, communication, dedication to the project.
- * If team is cross-disciplinary, discuss discipline-based assumptions.

Activity 2: Unlearning [15 min]

- What do you need to unlearn to approach your challenge or problem differently?
- EX. Unlearn the statement: "digital technology is value neutral. It is just a tool."
 - Whether they admit it or not, many students believe this to be a fundamental truth.
 - It leads them to assume that the solution to problems caused by technology is to build better technology.
 - How do we unlearn this assumption?
 - If we unlearn this assumption, what becomes possible?
 - If we do not unlearn this assumption, what are the consequences?

Pick three ideas
that you believe
your students
would need to
unlearn in order to
approach this IP.

Discussion

Why are we limited when it comes to imagining a just world that we believe is possible, but we can imagine a settlement on Mars?
