# Coding P2 due Friday

Fri, Nov 4	Kickass Property Lemma     $x^2$	[KT, Sec 5.4] (Project (Problem 2 <b>Coding</b> ) in)
Mon, Nov 7	Weighted Interval Scheduling    $x^2$	[KT, Sec 6.1] (Project (Problem 2 <b>Reflection</b> ) in)
Tue, Nov 8		(HW 6 out)
Wed, Nov 9	Recursive algorithm for weighted interval scheduling problem    $x^2$	[KT, Sec 6.1]
Fri, Nov 11	Subset sum problem     $x^2$	[KT, Sec 6.1, 6.2, 6.4]
Mon, Nov 14	Dynamic program for subset sum     $x^2$	[KT, Sec 6.4]
Tue, Nov 15		(HW 7 out, HW 6 in)
Wed, Nov 16	Shortest path problem     $x^2$	[KT, Sec 6.8]
Fri, Nov 18	Bellman-Ford algorithm     $x^2$	[KT, Sec 6.8]
Mon, Nov 21	The P vs. NP problem  	[KT, Sec 8.1]
Wed, Nov 23	<b>No class</b>	Fall Recess
Fri, Nov 25	<b>No class</b>	Fall Recess
Mon, Nov 28	More on reductions  	[KT, Sec 8.1]
Tue, Nov 29		(HW 8 out, HW 7 in)
Wed, Nov 30	The SAT problem  	[KT, Sec 8.2]
Fri, Dec 2	NP-Completeness  	[KT, Sec. 8.3, 8.4] (Project (Problem 3 <b>Coding</b> ) in)
Mon, Dec 5	$k$ -coloring problem  	[KT, Sec 8.7] (Quiz 2) (Project (Problem 3 <b>Reflection</b> ) in)

# Group formation instructions

## Autolab group submission for CSE 331 Project

The lowdown on submitting your [project](#) (especially the [coding](#) and [reflection](#)) problems as a group on Autolab.

Follow instructions **EXACTLY** as they are stated

**The instructions below are for Coding Problem 1**

You will have to repeat the instructions below for EACH coding AND reflection problem on project on Autolab (with the appropriate changes to the actual problem).

## Form your group on Autolab

**Groups on Autolab will NOT be automatically created**

You will have to form a group on Autolab by yourself (as a group). Read on for instructions on how to go about this.

# Make sure you are in your group

note #386   

stop following **2 views** [Actions](#)

## Coding P1 due today

A gentle reminder that the [first coding problem](#) is due by 11:58pm tonight!

Finally, make sure that you are officially included in your group on Autolab for the coding problem 1 before your group submits its code. If you are not included in the group on Autolab, you will get a ZERO on coding problem 1.

Please make sure that you verify that you see a submission for yourself on Autolab. It is your **PERSONAL RESPONSIBILITY** to make sure that this is the case. If your group forgets to do this is it your responsibility to remind them that you need to be included.

If your group has already submitted without you, make sure you are included in the group on Autolab and then someone from your group should re-submit.

project

[Edit](#) good note

# Friday OH shortened to 30 mins

note @380    stop following **1 view** Actions

## My Friday Office hours will be for 30 minutes

So sorry to do this but my Friday OH for Nov 4 will be for 30 mins from 12:45-1:15pm. This change is only for this week and the Wed OHs times will not change.

office\_hours

# Multiplying two numbers

Given two numbers  $a$  and  $b$  in binary

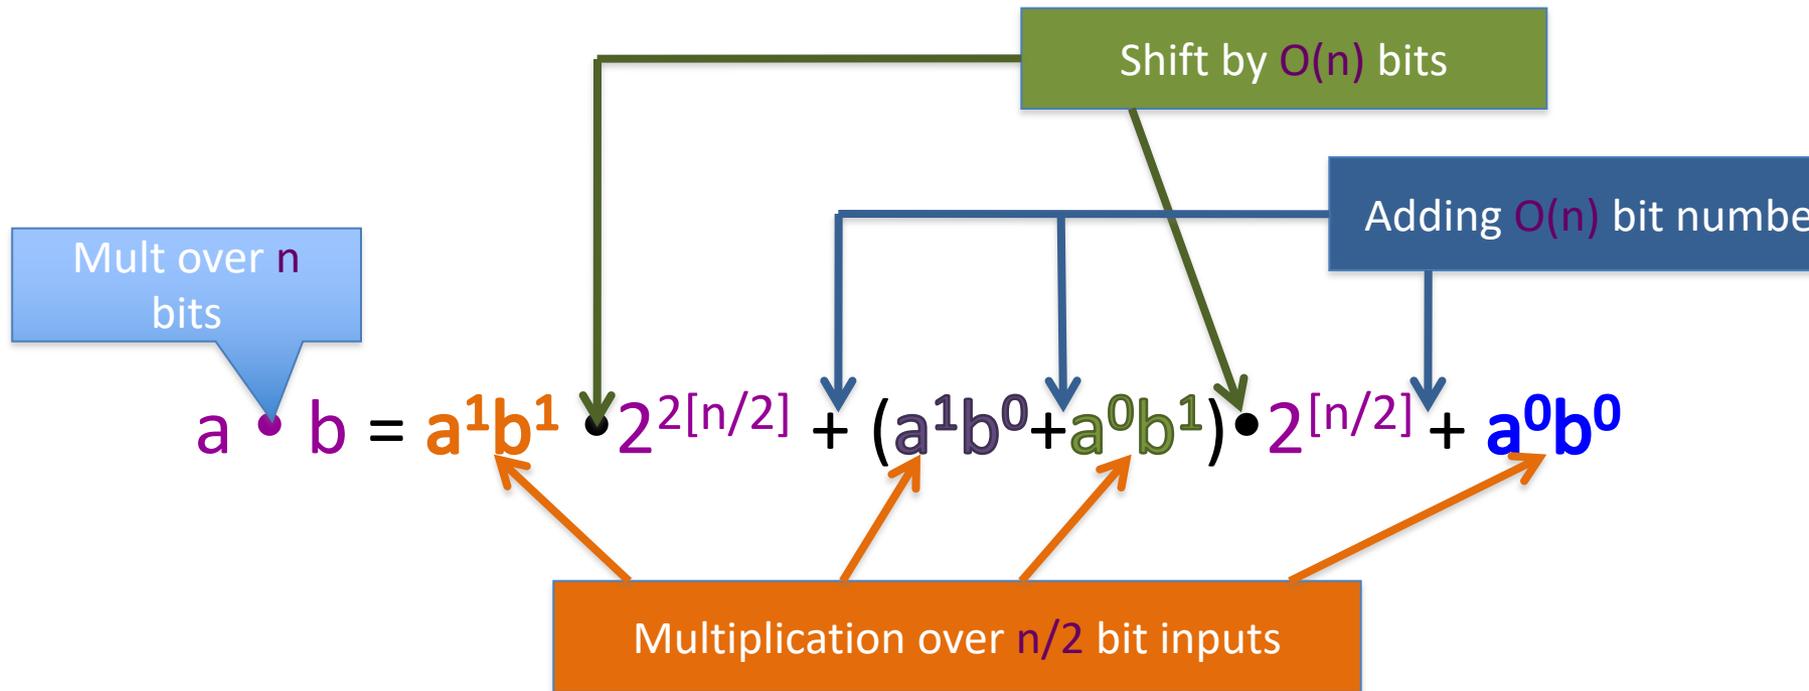

$$a = (a_{n-1}, \dots, a_0) \text{ and } b = (b_{n-1}, \dots, b_0)$$

Compute  $c = a \times b$

Elementary  
school  
algorithm is  
 $O(n^2)$

# The current algorithm scheme

$$T(n) \leq 4T(n/2) + cn \dots$$

$$T(1) \leq c$$

$T(n)$  is  $O(n^2)$

# The key identity

$$a^1b^0 + a^0b^1 = (a^1 + a^0)(b^1 + b^0) - a^1b^1 - a^0b^0$$

# Wait, how do you think of that?

## De-Mystifying the Integer Multiplication Algorithm

In class, we saw an  $O(n^{\log_2 3})$  time algorithm to multiply two  $n$  bit numbers that used an identity that seemed to be plucked out of thin air. In this note, we will try and de-mystify how one might come about thinking of this identity in the first place.

### The setup

We first recall the problem that we are trying to solve:

#### Multiplying Integers

Given two  $n$  bit numbers  $a = (a_{n-1}, \dots, a_0)$  and  $b = (b_{n-1}, \dots, b_0)$ , output their product  $c = a \times b$ .

Next, recall the following notation that we used:

$$a^{\uparrow} = (a_{\lceil \frac{n}{2} \rceil - 1}, \dots, a_0),$$

$$a^{\downarrow} = (a_{n-1}, \dots, a_{\lfloor \frac{n}{2} \rfloor}).$$

# The final algorithm

Input:  $a = (a_{n-1}, \dots, a_0)$  and  $b = (b_{n-1}, \dots, b_0)$

**Mult** ( $a, b$ )

If  $n = 1$  return  $a_0b_0$

$a^1 = a_{n-1}, \dots, a_{\lceil n/2 \rceil}$  and  $a^0 = a_{\lceil n/2 \rceil - 1}, \dots, a_0$

Compute  $b^1$  and  $b^0$  from  $b$

$x = a^1 + a^0$  and  $y = b^1 + b^0$

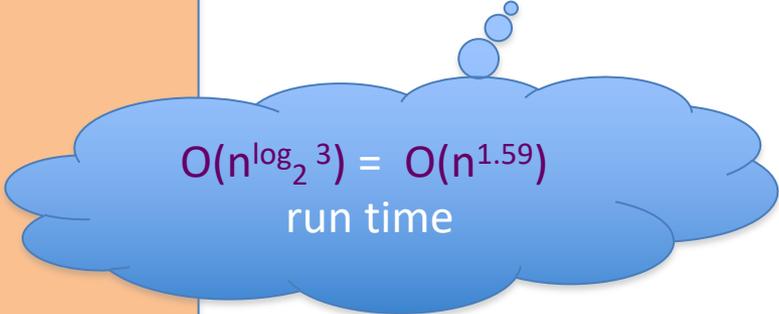

Let  $p = \text{Mult}(x, y)$ ,  $D = \text{Mult}(a^1, b^1)$ ,  $E = \text{Mult}(a^0, b^0)$

$F = p - D - E$

return  $D \cdot 2^{2\lceil n/2 \rceil} + F \cdot 2^{\lceil n/2 \rceil} + E$

$$T(1) \leq c$$

$$T(n) \leq 3T(n/2) + cn$$

$O(n^{\log_2 3}) = O(n^{1.59})$   
run time

All **green** operations  
are  $O(n)$  time

$$a \cdot b = a^1 b^1 \cdot 2^{2\lceil n/2 \rceil} + ((a^1 + a^0)(b^1 + b^0) - a^1 b^1 - a^0 b^0) \cdot 2^{\lceil n/2 \rceil} + a^0 b^0$$

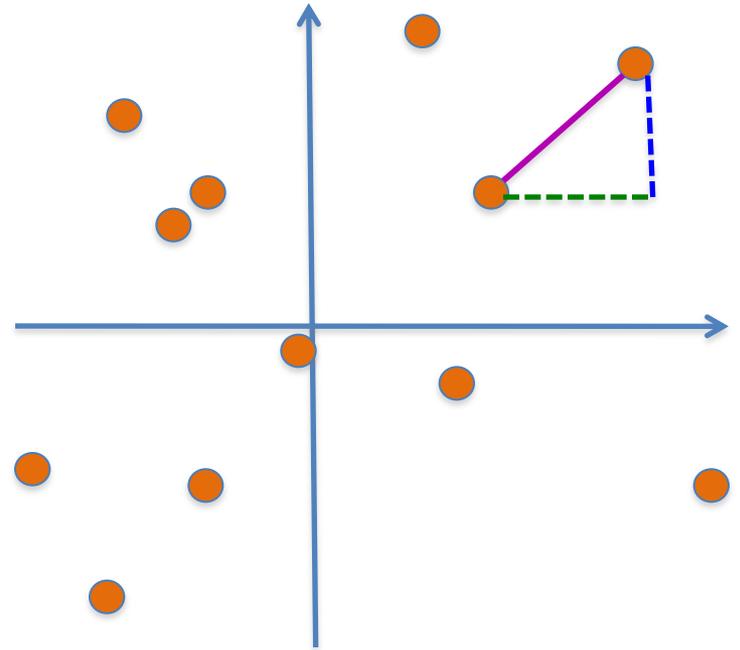

# Closest pairs of points

Input:  $n$  2-D points  $P = \{p_1, \dots, p_n\}$ ;  $p_i = (x_i, y_i)$

$$d(p_i, p_j) = ((x_i - x_j)^2 + (y_i - y_j)^2)^{1/2}$$

Output: Points  $p$  and  $q$  that are closest

# Group Talk time

$O(n^2)$  time algorithm?

1-D problem in time  $O(n \log n)$  ?

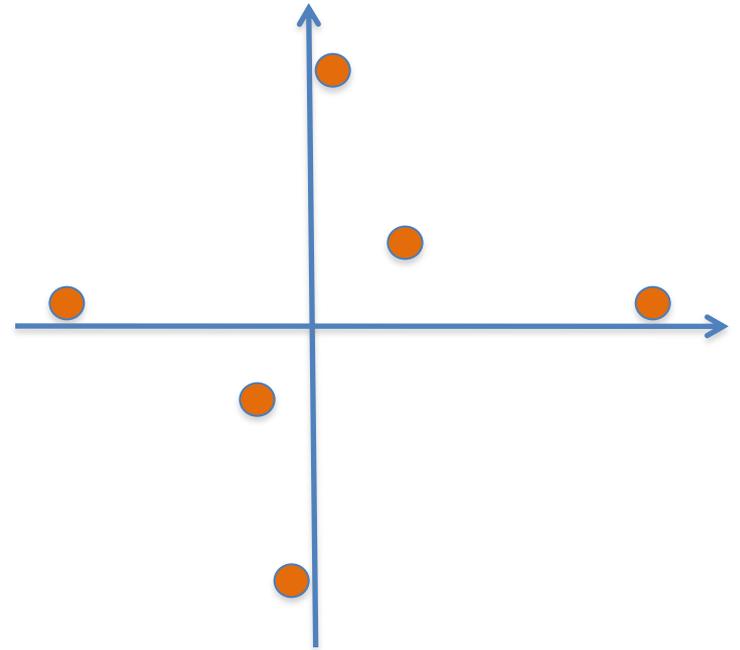

# Sorting to rescue in 2-D?

Pick pairs of points closest in **x** co-ordinate

Pick pairs of points closest in **y** co-ordinate

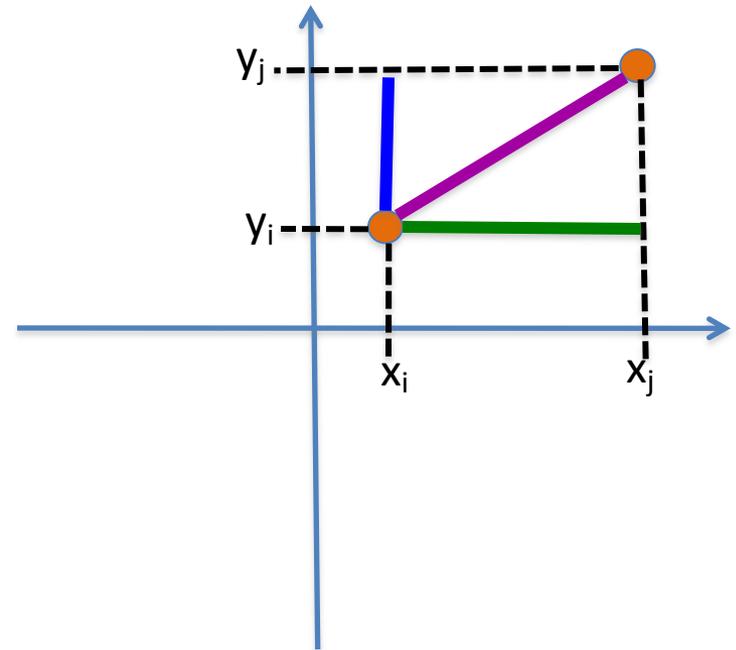

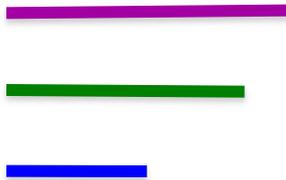

Choose the better of the two

# A property of Euclidean distance

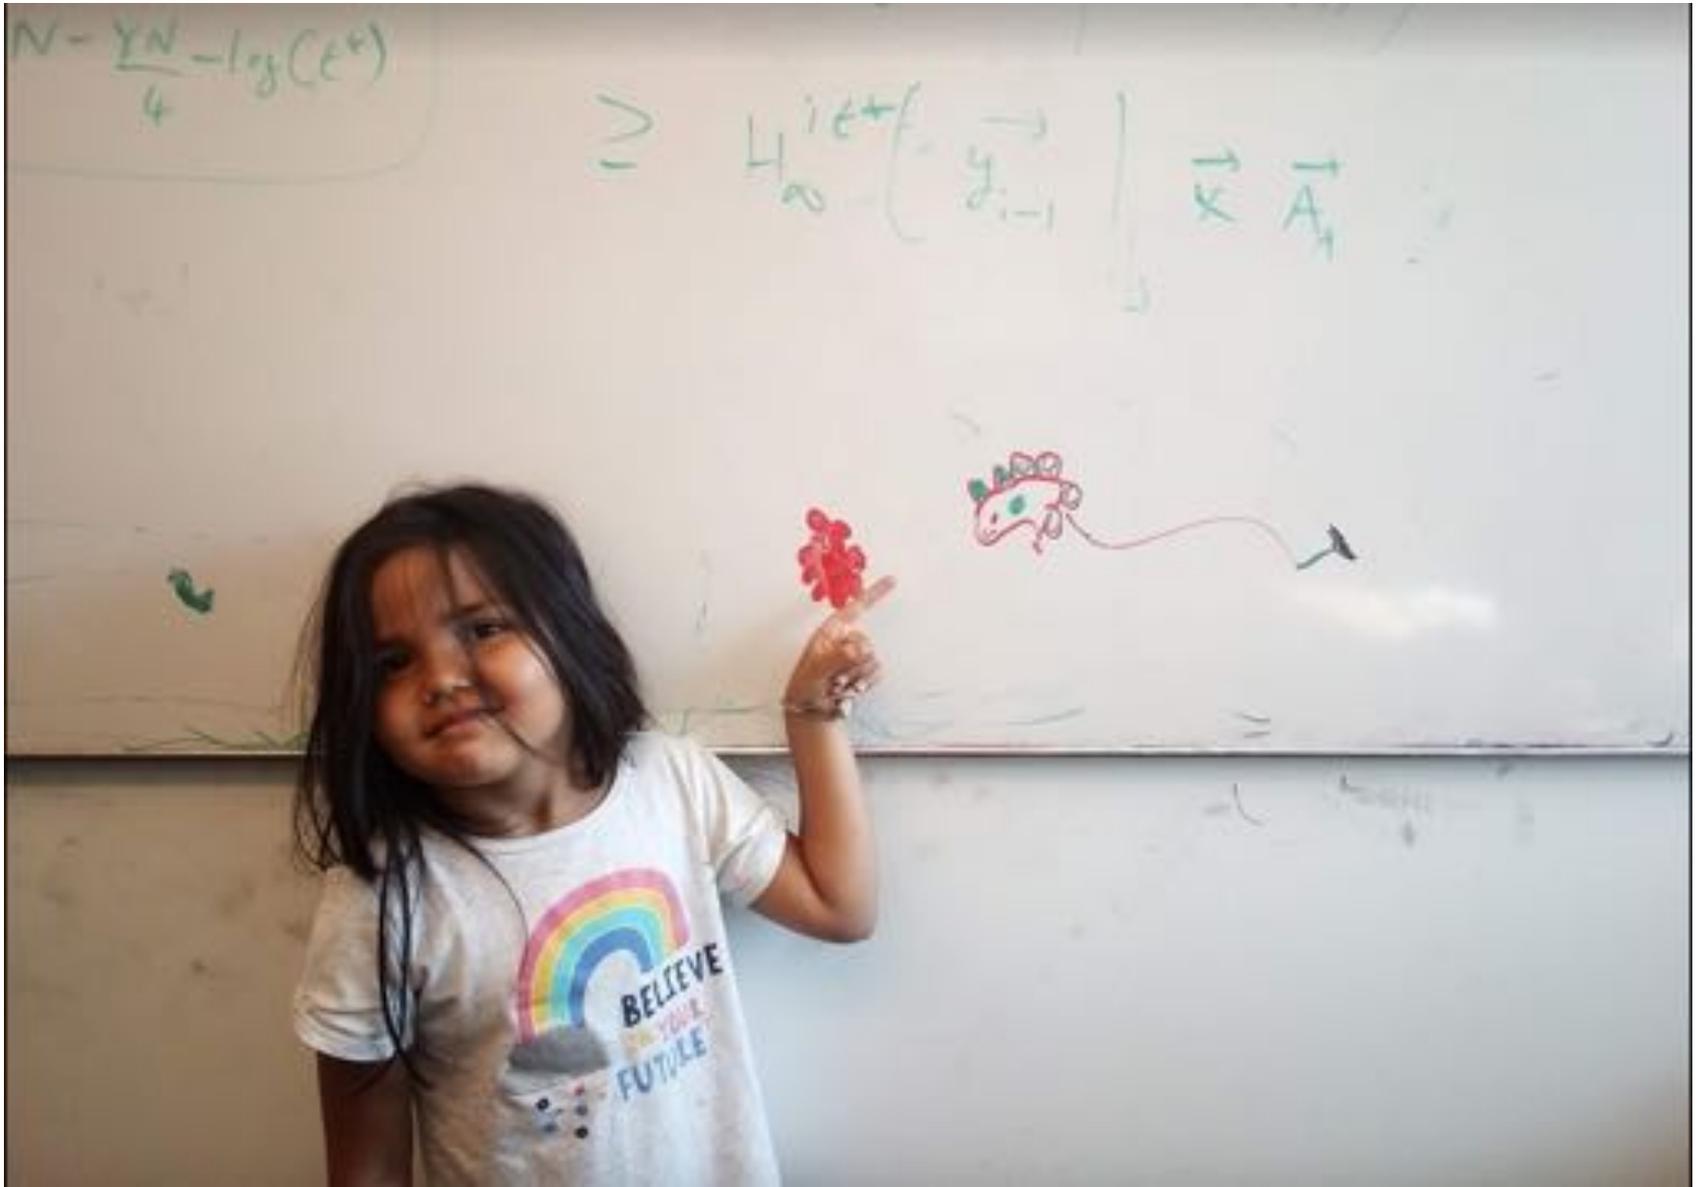

$$d(p_i, p_j) = ((x_i - x_j)^2 + (y_i - y_j)^2)^{1/2}$$

The **distance** is larger than the **x** or **y**-coord difference

# Questions/Comments?

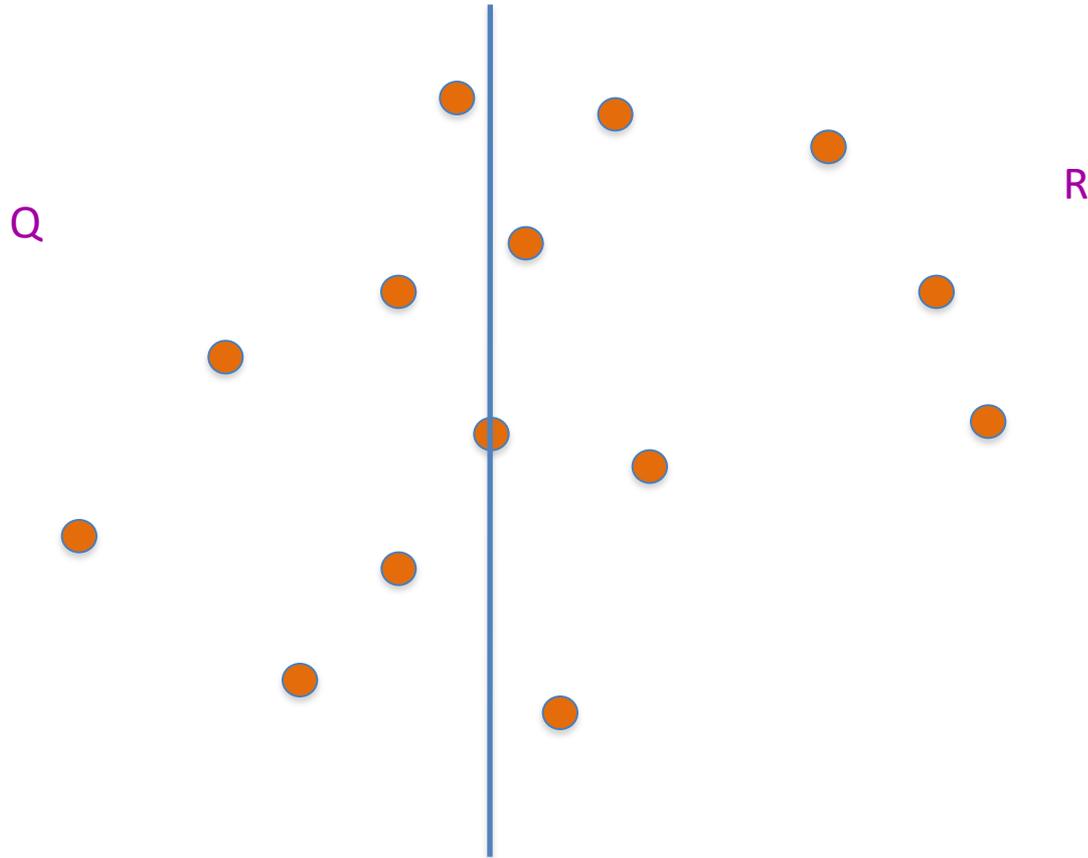

# Problem definition on the board...

# Rest of Today's agenda

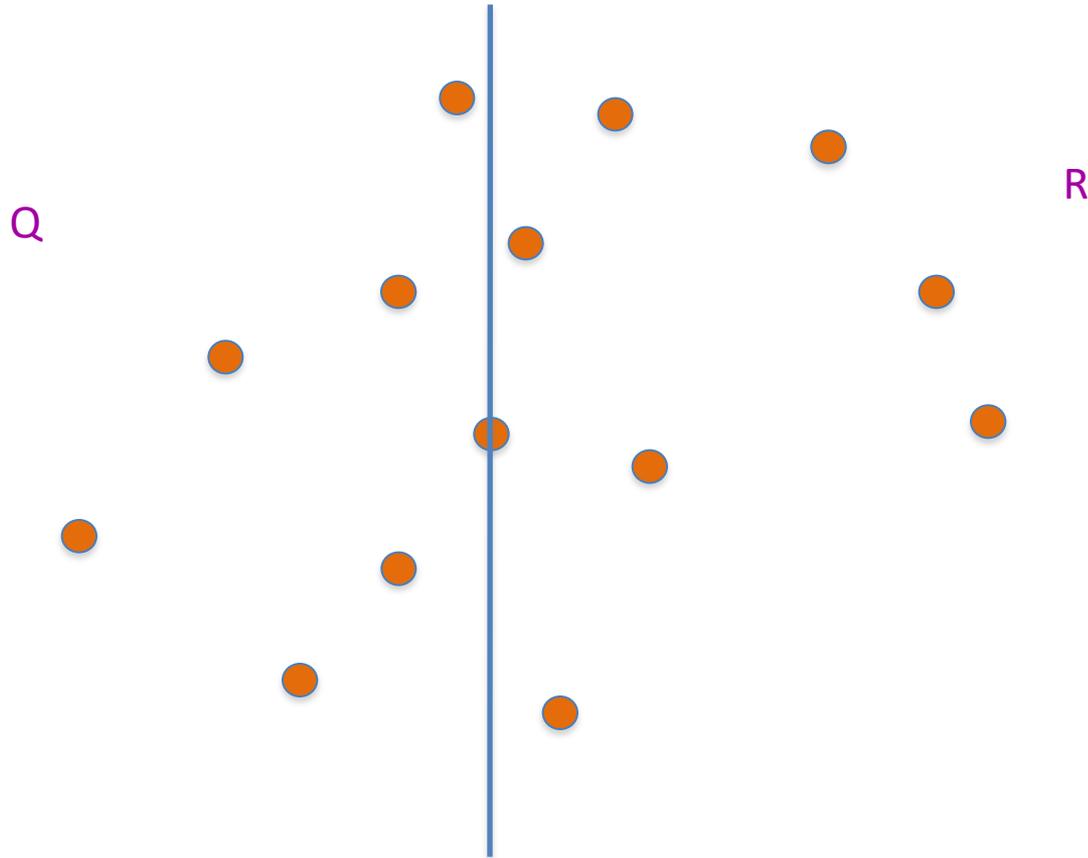

Divide and Conquer based algorithm

# Dividing up P

First  $n/2$  points according to the  $x$ -coord

# Recursively find closest pairs

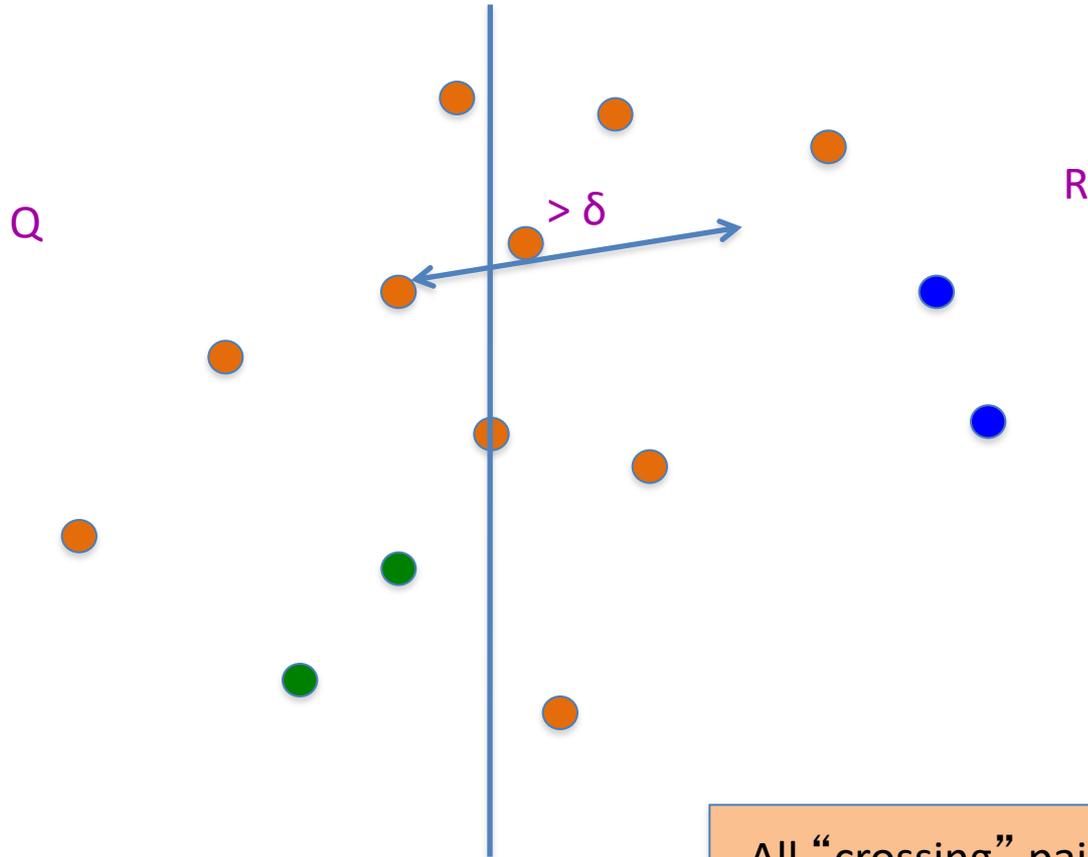

$$\delta = \min(\text{blue}, \text{green})$$

# An aside: maintain sorted lists

$P_x$  and  $P_y$  are  $P$  sorted by  $x$ -coord and  $y$ -coord

$Q_x, Q_y, R_x, R_y$  can be computed from  $P_x$  and  $P_y$  in  $O(n)$  time

# An easy case

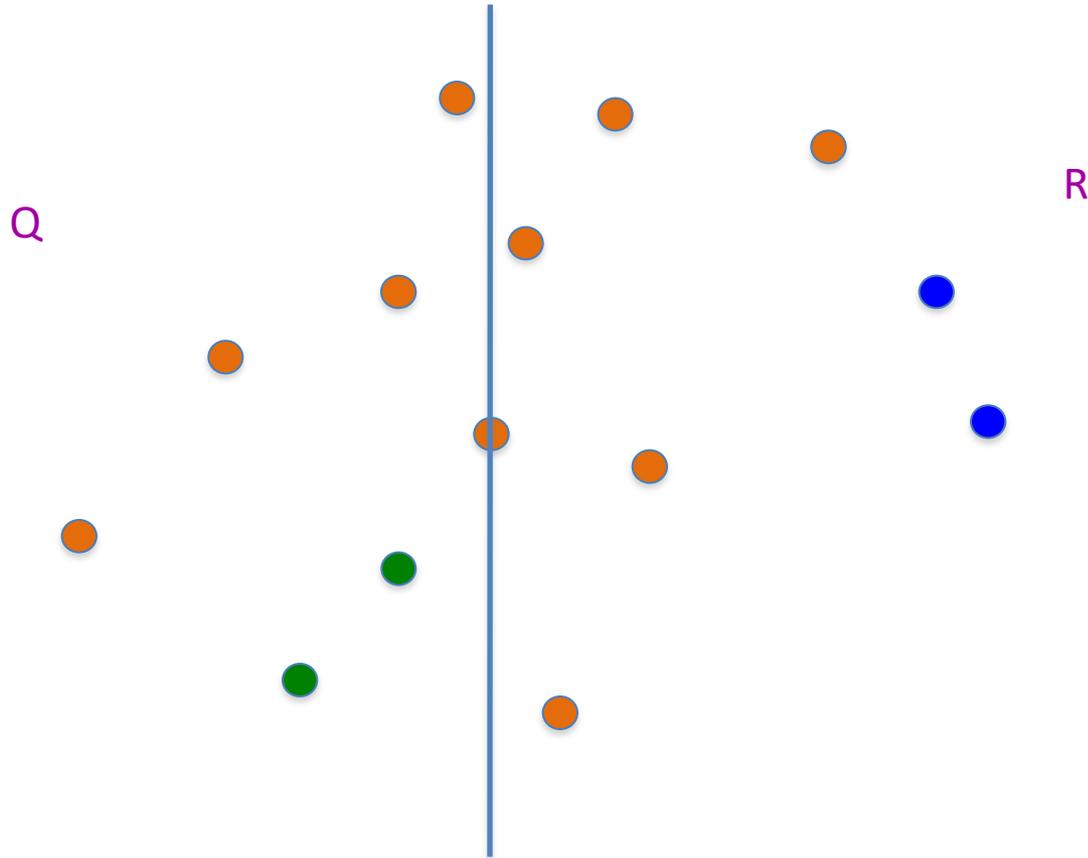

All “crossing” pairs have distance  $> \delta$

$$\delta = \min(\text{blue}, \text{green})$$

# Life is not so easy though

$$\delta = \min(\text{blue}, \text{green})$$
