208 Capen Hall

Day 36
Workshop Day

Announcements

- Presentations begin Friday (if you haven't signed up, please do ASAP)
  - Kevin, Hannan, Sanhanat
- Project is due next Friday, 12/9/22 @ 11:59PM
  - Submission via autolab as normal

Presentation Expectations

~5 minutes to present plus ~1 minute for questions/discussion.
Your presentation should touch on the following:

- What dataset you chose to work with, and why
  - Is it related to your research/graduate program? Explain how.
  - How big is the data set? How is it structured?

Expect that your classmates do not know much about your field or your chosen dataset - so give high-level context so everyone can make sense of your project.

Presentation Expectations

**~5 minutes to present plus ~1 minute for questions/discussion.
Your presentation should touch on the following:**

- What questions do you want to answer using your dataset?

These questions don't have to be profound, but if they are questions coming out of your research that's great - tell us about it!

Presentation Expectations

**~5 minutes to present plus ~1 minute for questions/discussion.
Your presentation should touch on the following:**

- Explain how you need to process the data to answer the questions you have

(e.g. in our HW 4/5 we had to count how many service requests each department had in order to compute percentages for the donut plot)

Presentation Expectations

~5 minutes to present plus ~1 minute for questions/discussion.
Your presentation should touch on the following:

- Explain how you intend to visualize the data
  - What plots/charts did you choose and why?
- What kind of user-controls are available to control the visualizations?
  - Why did you choose those?
  - Why are they meaningful?

  (again, the answer need not be very deep or profound)

Presentation Expectations

~5 minutes to present plus ~1 minute for questions/discussion.
Your presentation should touch on the following:

- If you have the code partially or fully working, do a brief demo!
- Include other information which you think will be interesting.
- Slides are helpful, but not mandatory. You can put talking points and images in a Word or Google doc too.

Remember, the presentation should be low-stress - have fun with it!
