Ordering

\Rightarrow i^{th} column only depends on column $i-1$

\Rightarrow good ordering: column by column (L to R $0, 1, \dots, n-1$)

Bellman-Ford Algo:

0. Allocate an $n \times n$ matrix M
1. $M[t, 0] = 0, M[u, 0] = \infty \forall u \neq t$
2. for $i = 1 \dots n-1$
 for $u \in V$

$$M[u, i] = \min \left\{ M[u, i-1], \min_{w: (u,w) \in E} \{ C_{u,w} + M[w, i-1] \} \right\}$$
3. Return $M[s, n-1]$ for $\forall s \in V$

following
the graph
in AP2's lec

$$M[a,1] = \min \{ M[a,0],$$

$$\min \{ -4 + M[b,0],$$

$$-3 + M[c,0] \}$$

$$= \min \{ \infty, \min \{ -4 + \infty, -3 \}$$

$$= -3$$
