## CDC 6600 Seymour Cray, 1963 A fast pipelined machine with 60-bit words - 128 Kword main memory capacity, 32 banks Ten functional units (parallel, unpipelined) - Floating Point: adder, 2 multipliers, divider - Integer: adder, 2 incrementers, ... Hardwired control (no microcoding) Scoreboard for dynamic scheduling of instructions Ten Peripheral Processors for Input/Output - a fast multi-threaded 12-bit integer ALU Very fast clock, 10 MHz (FP add in 4 clocks) >400,000 transistors, 750 sq. ft., 5 tons, 150 kW, novel freon-based technology for cooling Fastest machine in world for 5 years (until 7600) - over 100 sold (\$7-10M each) 490/590, Spring 2011 18

• Is there a structural conflict at the WB stage?
